2.2 Features

Gun shooting is the core of the game which is designed to be as “par” and “common” as the basketball game machine. The game is designed based on the real event in the Olympic Games. The fast-speed pace coupled with the billboard and ticket rewards give the player more motives to purse higher scores. The rapid shooting and time restriction give the player an opportunity to experience the real tension in the Games. The difficulty increases level by level to give the player a great sense of achievement. The overall design is closely bound with the Olympic event to emphasize the sport skills and highlight the appeal to the “professional aesthetic shooting game”.

2.3 Interface and operation

2.3.1 Main screen description

2.3.2 Operation

Insert coins and press the start button to start the game. The gun is the controller. Use the rear and front sights to aim at the target on the screen and pull the gun trigger to shoot.
3 Rapid setting process

3.1 Gun calibration

All machines have been calibrated and configured prior to the delivery. If the aiming point or the cursor offsets, calibration can be conducted from the backend. The simple steps are described as follows:
Open the front door of the machine, find the control panel and press the right key to enter the backend >> select “Hardware Calibration” on the backend main menu >> select “Controller Calibration” to show the calibration screen.

Take the gun to shoot three targets on the screen in order. A confirmation message appears after the shooting.

Select “✓” to confirm and go back to the backend menu. The new calibrated value is applied after the user leaves the backend and enters the game. (Refer to Ch 4.11.1 of the User Manuel for detailed operation description.)

3.2 Tickets resupplying

When the machine runs out of tickets, the “Notify the Service Staff to Resupply Tickets” message will appear on the screen. This function can be deactivated by setting from the backend.
The staff needs to open the front door of the machine to replace the roll of the ticket tapes. After this has been done, press [TICKETS] to continue dispensing the tickets.
4 Backend management system

4.1 Backend basic operation

Entering the backend

Various backend operations can be carried out through the control panel (arrow key) inside the machine.

Press the <LEFT KEY> to show the backend settings screen.

Setting operation

If the user enters the backend during the game, the game will be ended directly and the score in the round will not be recorded in the backend. The unsaved Game Log is null. Use the <UP KEY> and <DOWN KEY> to move the selected box upwards and downwards and use the <LEFT KEY> and <RIGHT KEY> to enter or adjust the settings.

Resupplying operation

When the machine runs out of tickets, the “Notify the Service Staff to Resupply Tickets” message will appear on the screen. The staff needs to replace the roll of the ticket tapes inside the control panel.

<ADDED KEY>: If there are unprinted tickets, press the key to continue dispensing the tickets after the roll of the ticket tapes is replaced.

Function description

In the following description

↑ stands for <UP KEY>. ↓ stands for <DOWN KEY>.
← stands for <LEFT KEY>. → stands for <RIGHT KEY>. 
4.2 Main menu

Press at any time after the machine is booted to show the backend main menu. In the main menu, use or to move the selected box and press to show the sub-screen of each function or implement the function. Select “Exit” and press the return to the standby screen.

4.3 System information

Show the name, version and device serial number of the software
Display devices include the I/O board and gun. (If there is no serial numbers, 0 appears in the field.) Because the contents are not editable, the default setting is “Back to Main Menu”.
## 4.4 Game settings

<table>
<thead>

</tr>
<tr>
<td>Advanced setting</td>
<td>Refer to 4.5 and 4.6</td>
<td></td>
</tr>
</tbody>
</table>
4.5 Advanced setting 1

4.5.1 Entering the advanced setting

The advanced settings are used to set the game difficulty and ticket payout.

4.5.2 Level available

The game has 5 levels and can be adjusted according to the actual operation status.

4.5.3 Ticket rewards

There are 10 levels. The ticket rewards in each level can be set individually (up to 1000 tickets).
4.6 Advanced setting 2

The round and qualification can be set for each level here.

4.6.1 Game Rounds
Set the number of rounds in each level with the minimum of 1 round and maximum of 5 rounds. If the number of rounds is less than 5, the following fields, which do not need to be set, turn dark and cannot be set.

4.6.2 Level Pass Score

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pass score</td>
<td>Set the pass core for the level. If the player reaches the score, he/she can enter the next level. If the player fails to reach the score, he/she can choose to continue or end the game.</td>
<td>The pass score cannot exceed the total scores in a given level.</td>
</tr>
<tr>
<td>Time restriction</td>
<td>Set the time restriction for each round in sequence. The player has to finish shooting within the timeframe; otherwise, the round will be forced to end.</td>
<td>The time restriction cannot be less than 1 second and more than 20 seconds.</td>
</tr>
<tr>
<td>Target distance</td>
<td>Set the target distance of each round in order</td>
<td>The distance cannot be shorter than 3 meters and longer than 25 meters.</td>
</tr>
</tbody>
</table>

4.6.3 Next Level Settings
Select to set the next level in accordance with the prompt or choose the “Previous Page” to modify the settings of the previous round. The rule and item settings are the same.
4.7 Sound Volume Setup

The volume control of the music and sound effects can be set for DEMO and GAME respectively.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DEMO music volume</td>
<td>Set the DEMO music volume</td>
<td>DEMO includes: opening, game demonstration and billboard demonstration..</td>

<td></td>
</tr>
<tr>
<td>GAME sound effect volume</td>
<td>Set the sound effect volume for the game</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The higher the value, the high the volume</td>
<td></td>
</tr>
</tbody>
</table>
Set the system time and date.
The screen shows the overview of the account management. It mainly shows the major revenue information from the last time when the account information has been cleared till now. The item includes:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Payout G.P counting</td>
<td>The number of times the player though insert the coins to pay for the play</td>
<td></td>
</tr>
<tr>
<td>Free G.P counting</td>
<td>The number of times playing in the free mode</td>
<td></td>
</tr>
<tr>
<td>Total G.P counting</td>
<td>Payout G.P counting + free G.P counting</td>
<td></td>
</tr>
<tr>
<td>Total income</td>
<td>Expense per round * paid times</td>
<td></td>
</tr>
<tr>
<td>Total awarded ticket</td>
<td>Total of Dispensed tickets</td>
<td></td>
</tr>
<tr>
<td>Ticket cost</td>
<td>Total dispensed tickets * ticket value</td>
<td></td>
</tr>
<tr>
<td>Profit</td>
<td>Total income – ticket cost</td>
<td></td>
</tr>
</tbody>
</table>
4.9.2 **Daily Account Report**

The screen shows the daily revenue information, including the revenue-related items and the achievement of players.

Counting: This shows how many games were played during each hour of the day.
4.9.3  Weekly Account Report
The contents and items are the same as the daily report. The reference period is one week.

4.9.4  Monthly Account report
The contents and items are the same as the daily report. The reference period is one month.

4.9.5  Player scores distribution
The awards distribution for the player from the last time when the account information has been cleared till now is shown on the screen to observe the difficulty of the current settings and evaluate whether the result conforms to the expectation.
4.9.6 Clear data
After the screen is displayed and a confirmation message appears, select “YES” to clear account information.

4.10 Language setting
Set the language for all text and voice messages.
4.11 Hardware calibration

4.11.1 Controller calibration

The machine has been calibrated prior to the delivery. If the software is re-installed or updated during the maintenance, calibration should be conducted again.

The steps for calibration are as follows:

After enter the control calibration,

- **A target appears at the upper left corner of the screen.**
  - Aim the gun at the target and pull the gun trigger.

- **Then, the target will move to the middle of the screen.**
  - Aim at it and pull the gun trigger.

- **Finally, the target will move to the lower right corner.**
  - Aim at it and pull the gun trigger.
After the calibration is completed, a confirmation screen will appear. The cursor will appear on the screen. If calibration is completed, shoot the green check to go back to the game. If you want to continue the calibration, shoot the red icon to restart the calibration.

4.11.2  
Controller Vibration Test  
Select the item to test the vibration function of the controller (gun). Note: Confirm to turn “ON” the “Controller vibration switch” After enter controller vibration test, the controller will vibrate.

4.11.3  
Led light test  
There is no external light in this version; therefore, the function is not available.

4.11.4  
Button test  
Select to show the button test screen

Press the  ,  ,  , or  on the backend control panel according to the instructions. If the signal is normal, the “Normal” message will appear. If the signal is abnormal, no message will appear.

Press the Start button on the front side of the machine according to the instructions. If the signal is normal, the “Normal” message will appear. If the signal is abnormal, no message will appear.

Pull the gun trigger according to the instructions. If the signal is normal, the “Normal” message will appear. If the signal is abnormal, no message will appear.
Press **TICKET** on the backend control panel according to the instructions.
If the signal is normal, the “Normal” message will appear.
If the signal is abnormal, no message will appear.
4.11.5 Screen Test

**Color Adjustment**

Select “Color adjustment” to show the screen. Adjust the color on the display with reference to the screen. Press the **Start** button on the machine to exit.

**Screen Adjustment**

Select “Screen Adjustment” to show the screen. Adjust the vertical, horizontal and display scopes. Press the **Start** button on the machine to exit.
Select “Color Screen Setting” to show solid screens in sequence. Adjust the color with reference to each screen.
### 4.11.6 Coin Mechanism Test

Enter “Coin Mechanism Test” and a message will appear to request inserting coins. Insert a token into the machine. The border turns yellow to indicate normal function.

<table>

Load Config File
<Back to Main Menu>

owed tickets 0000001
4.11.8 Load Config File

Insert the USB in which the configuration file (zweroplus.txt) is saved into the console. Enter to load the configuration file.
If the file is loaded successfully, the “Load success” message will appear.
4.12 Internet Setting
This is a reserve interface. The function is not available in this version.

4.13 Restore Default Setting
“Restore Default Setting”:
Apply the default setting and clean the coin number. Press to show the confirmation box and select “YES” to finish the setting.
5 Troubleshooting

5.1 Troubleshooting

Q1. Screen flashes after booted.
Ans: The Android machine is damaged and needs to be replaced.

Q2. The screen shows “insert 0 coins”.
Ans:
    Troubleshooting 1: The external SD card may not be inserted. Please practically insert it.
    Troubleshooting 2: The external SD Card file is corrupt. Please change the external SD card.
Q3. Everything is ok but when the player begins to shoot, the screen freezes.
Ans:
    The external SD card file is corrupt and needs to be changed
    p.s (Remember to calibrate the front sight on the backend after the first installation or the external SD card changed.)
Q4. The screen goes back to the desktop after the player enters the game.
Ans: It could be instability of Android internal system or out of memory. Please re-boot the machine.
