## 7. PRODUCT ASSEBLY INSTRUCTION

8. ERRORS \& TROUBLESHOOTINGS

## 1．PRECAUTIONS

## 1．Precautions before installation

Please make sure the power voltage \＆frequency requirements are compatible with the product installation location
A fire or electric shock can be caused if the proper voltage \＆frequency are not used

## 2．Product Assembly Precaution

Please get help from a specialist to assemble the product
Please follow the steps and instructions from the manual
Make sure to use the indoor cables that are compatible with the power consumption specification．
A fire or electric shock can be caused if the proper power consumption cables are not used Make sure to use an independent power supply equipped with a surge－suppressor
A fire or electric shock can be caused if a power supply is used without a surge－suppressor Please avoid putting the cables on the passageway
People may fall from trapping the cables

## 3．MOVING \＆HANDLING PRECAUTIONS

Make sure not to damage the power cables when moving the product
Damaged power cables can cause major product defects
Make sure not to twist or over pressed while on moving or transporting．

## 4．Management after Installation

Please note that using balls other than Genuine Andamiro football may cause damage to machine

## 5．Precautions during operating

Excessive actions may cause injury
Do not drink and play
Please kick the ball safely to avoid injury or any other accidents
Be sure not to kick the machine and the safety hitting cover
Be sure to wear a shoe when kicking the ball
Do not stand on the ball or machine

## 2. PRODUCT SPECIFICATION

Power Requirement: 110V or 220V
Power Rating: 80W
Dimensions: W1070 X D1200 X H2230
(Height adjustment stopper installed 50~70 height up, Max height 2300)
Weight : 220 Kg

## 3-2. Location of the stickers to attach

## 3-3. How to replace wheel sticker

1) Using the 4 mm wrench driver, the bolt of acryl cover.
2) Attach the sticker after checking the location of the stickers.
(Attention: No extra sticker !!)
3) Assemble the acryl cover again.

## 4. TYPES OF PCBs \& CIRCUIT DIAGRAM 4-1. MAIN PCB

1. AC24V input (from Drive JP7)
2. Backup input (Extra power, AC 110 or 220 V )
3. Driver PCB JP9 output
4. Driver PCB JP3 output
5. Bill output
6. Driver PCB JP14 output
7. Porter sensor output(location)
8. Porter sensor output(speed)

## 7. PRODUCT ASSEMBLY INSTRUCTION

Step 3.

1) Adhere machine closely to the ground by circling the rubber stopper installed on the bottom of machine.

## - SUBSIDARY MATERIAL FOR ASSEMBLY

12 mm Bolt ,Washer, Spring Washer

4mmBolt, Cable Ties, NY Nut, Mount base

AC Power Cable (110V or 220V)

110V

220V

Trouble shooting

## 8. Errors and Trouble shootings

| SYMPTOM | CHECK(CAUSE) | CORRECTION |
| :---: | :---: | :---: |
| No power on | - Check power cable <br> - Check power switch <br> - Check fuse status | - Check cables, switch, fuse and change |
| No FND window | - Check connecting cable between PCB and FND |  |
| No sound | - Check connecting cable between PCB and speaker <br> - Damaged speaker | - Check cables and speaker and change |
| No more game processing such as no point display or no wheel movement in spite of kicking a ball | - Check speed indicating sensor or Sensor blade <br> - Check sensor connecting cable | -Check cables, blade, sensor and change (Refer to 20p) |
| FND Error 1 <br> the ball does not come to kicking position | - FND Error No 1 displays in case that the ball does not come to kicking position. <br> - In case of pushing the ball by force <br> - In case of weakened spring tension | - Check foreign material <br> - Adjust spring tension (refer to 20 p) <br> - Turn off the power and restart the machine |
| FND Error 2 <br> the ball does not spin normally | - FND Error no 2 displays in case that the ball doses not spin normally <br> - Check location sensor inside of the wheel <br> - Check stepping motor | - Open the cover and dissemble the wheel. and check sensor and motor <br> - Turn off the power and restart the machine | Trouble shooting

- How to change the ball

After removing bolt from the ball connector, replace old ball with a new ball

- How to change the ball poll

Remove the bolt from the ball connecting assembly by using a spanner and an wrench

By using a spanner and an wrench, remove the bolt crossing between ball connecting assembly and ball poll and then assemble the new ball poll

- Checking or changing of location sensor and speed indication sensor

When the machine does not recognize the score, replace a sensor bracket,

Change the connector by removing 2 bolts shown in the picture above

Tip> Correct location of blade: It operates normally when it indicates the rear location sensor while a ball comes forward

- Spring tension control

When a ball come to kicking position without power, adjust the spring tension after dissembling tension control device, move the tension control one level forward to make the tension loose move the tension control one level backward to make the tension tight
